

**METL** is a regional coalition of the Manhattan, Emporia, Topeka, and Lawrence Chambers of Commerce, which seeks to leverage the combined strength of nearly 3,000 member businesses and organizations, represented by 30 elected representatives and senators in our region.

## 2025 LEGISLATIVE PRIORITIES

**Workforce Development.** The METL coalition understands that workforce development must incorporate elements of strong quality of life to attract and retain talent. Therefore, programs that address significant community challenges and bolster up our labor market are essential to ensuring success in this area.

**Technical Colleges.** *The proposed Kansas Technical College High Impact Investment Fund would provide outcomes-based investment resources to technical colleges with an emphasis on industry-recognized credential and/or academic completion. Technical colleges throughout the state partner with existing and prospective Kansas employers to design degree programs that match the skills today's employers need to thrive and grow.*

**Childcare.** *The METL Coalition supports efforts to streamline state programs that impact the delivery of childcare services. This current system is spread across several state agencies, creating bureaucracy that hinders our ability to efficiently implement the necessary interventions and solutions to scale up the delivery of high quality, affordable early childcare, and education.*

---

### OTHER ISSUES:

**Fiscally responsible taxation.** METL supports a tax policy that encourages business growth and is competitive with surrounding states. This includes seeking ways to make state tax reporting requirements more business friendly, especially for small businesses.

**Transportation.** Protect existing transportation funding sources (sales tax, fuel tax, bonding, vehicle registration fees, etc.) Undiminished funding of the Eisenhower Legacy Transportation.

**Military.** Strengthening the Governor's Military Council. The GMC is a key partner working to grow and optimize the military presence in Kansas. GMC leverages this growth into additional defense related industry and jobs.

**Medicaid Expansion.** KanCare expansion will help stimulate the economy and create thousands of jobs. A study by an economist from Kansas State University found that expanding KanCare would create more than 23,000 new jobs. It would protect access to care and save jobs, especially in rural areas.
